February 3, 2011

Download

- Go to:

  http://www.tug.org/texlive/

- Choose the link called downloading over the net
- Download the file install-tl.zip
- Extract the files to a directory.
- These are the *installations files* so go to that directory.

Installing

- ▶ The installation instructions are available from the download page.
    - ▶ http://www.tug.org/texlive/quickinstall.html
- ▶ If you use Windows, please read
  http://www.tug.org/texlive/windows.html as well!
- ▶ Run the file install-tl.bat (only on you are on Windows).
- ▶ After fetching a few files, an installation wizard will appear.
- ▶ Press Next three times and then Install.
    - ▶ Well over 2000 packages need to be downloaded and installed, so please be patient!

TeXnicCenter

- ▶ A useful and powerful editor for LATEX TeXnicCenter, download it from:

  http://www.texniccenter.org/

- ▶ Choose Download (a large icon, you can't miss it!)
- ▶ Download TeXnicCenter Installer, the first alternative.
- ▶ Install by following the installation wizard.
    - ▶ Accept all the default selections.
- ▶ On first start, a configuration wizard will start.
    - ▶ Follow the instructions and supply the paths for where you installed LATEX.
    - ▶ The binary files are located under
      C:\texlive\2010\bin\win32
    - ▶ The dviviewer is, by default, called dviout.exe in the above directory.
